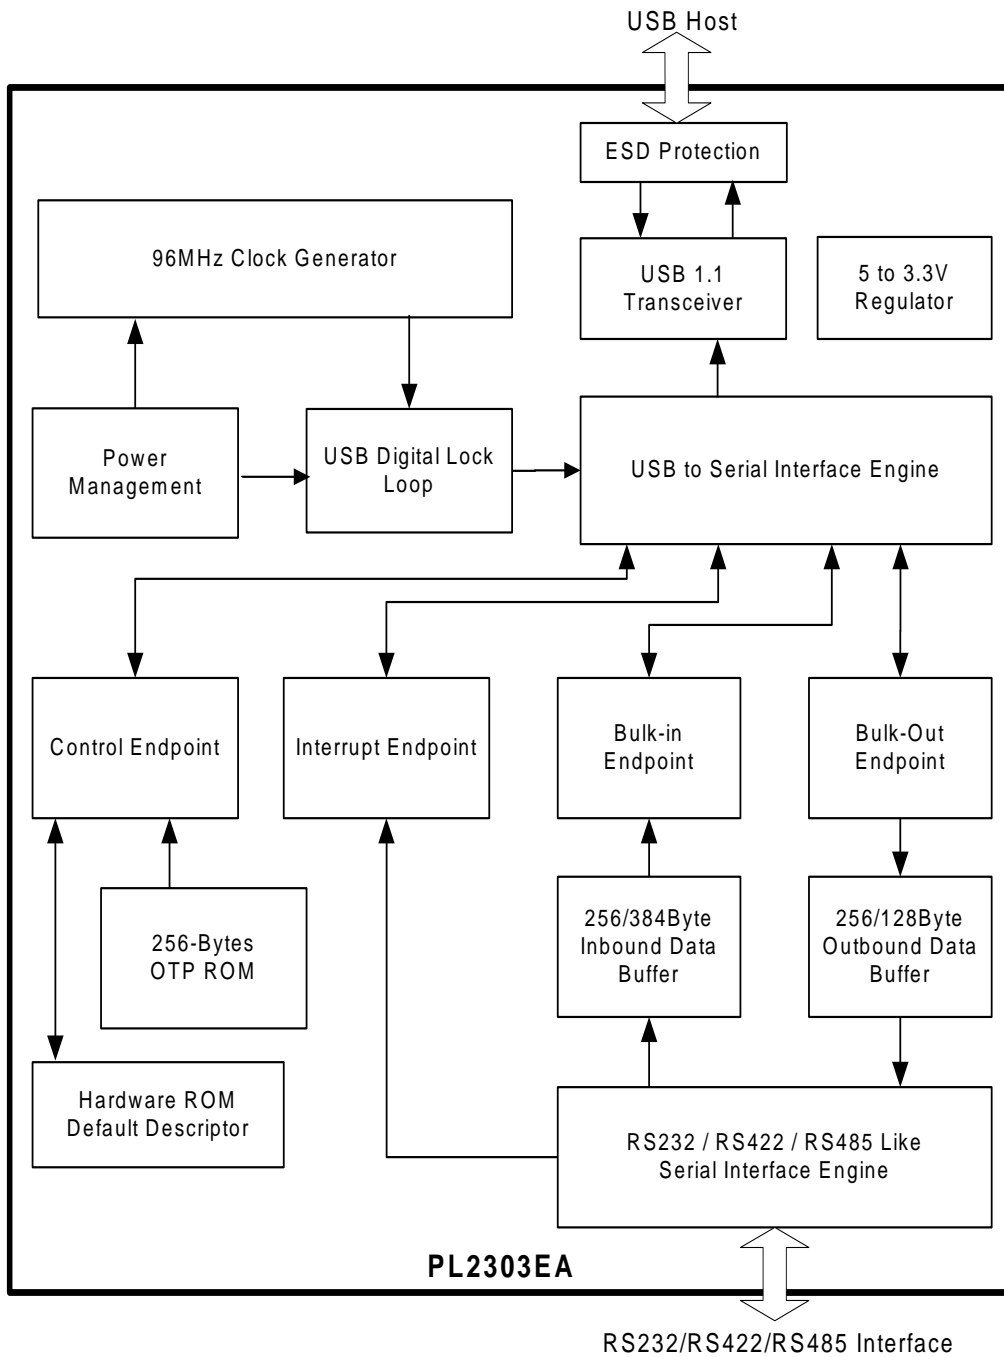

Figure 2-1 Block Diagram of PL2303EA

3.0 Introduction

The PL2303EA provides a convenient solution for connecting an RS232-like full-duplex asynchronous serial device to any Universal Serial Bus (USB) capable host. By providing a virtual COM port thru USB, the PL2303EA compatible drivers could simulate the traditional serial COM port on most operating systems allowing the existing serial port applications to easily migrate and be made USB ready.

Additionally, the PL2303EA provides USB port system-level ESD (electrostatic discharge) protection that eliminates the need for external ESD protection components to minimize PCB size and save BOM costs. The PL2303EA offers ESD protection on the USB port pins up to $\pm 15\text{kV}$ Human Body Model (HBM) and is according to the IEC-61000-4-2 ESD specification.

By taking advantage of USB bulk transfer mode, large data buffers, and automatic flow control, the PL2303EA is capable of achieving higher throughput compared to traditional UART (Universal Asynchronous Receiver Transmitter) ports. When real RS232 signaling is not required, baud rate higher than 115200 bps could be used for even higher performance. The flexible baud rate generator of the PL2303EA could be programmed to generate any rate between 75 bps to 12M bps.

The PL2303EA is exclusively designed for mobile and embedded solutions in mind, providing a small footprint that could easily fit in to any connectors and handheld devices. With very small power consumption in either operating or suspend mode, the PL2303EA is perfect for bus powered operation with plenty of power left for the attached devices. Flexible signal level requirement on the RS232-like serial port side also allows the PL2303EA to connect directly to any 3.3V~1.8V range devices.

6.0 USB Standard Descriptors

The PL2303EA supports one configuration with one interface and four endpoints. The descriptors are basically stored in an internal hardware ROM. However, some fields could be optionally modified by properly programmed on-chip OTPROM. The contents of all descriptors are shown in the following sections and the format of OTPROM would be given in later chapter.

6.1 Device Descriptor

Table 6-1 Device Descriptor

Offset	Field	Size	Value	Description
0	<i>bLength</i>	Byte	12h	Size of this descriptor (in bytes)
1	<i>bDescriptorType</i>	Byte	01h	DEVICE descriptor type
2	<i>bcdUSB</i>	Word	0110h	USB Specification Release Number 1.1
4	<i>bDeviceClass</i>	Byte	00h	
5	<i>bDeviceSubClass</i>	Byte	00h	
6	<i>bDeviceProtocol</i>	Byte	00h	
7	<i>bMaxPacketSize0</i>	Byte	40h	Maximum packet size for endpoint zero is 64
8	<i>idVender</i>	Word	067Bh	Vender ID ⁽¹⁾
10	<i>idProduct</i>	Word	2303h	Product ID ⁽¹⁾
12	<i>bcdDevice</i>	Word	0400h	Device Release Number ⁽¹⁾
14	<i>iManufacturer</i>	Byte	01h	Manufacturer string descriptor index
15	<i>iProduct</i>	Byte	02h	Product name string descriptor index
16	<i>iSerialNumber</i>	Byte	00h/03h	Serial number string descriptor index ⁽²⁾
17	<i>bNumConfigurations</i>	Byte	01h	One configuration.

Notes:

- (1) – The Vender ID, Product ID, and Device Release Number could be replaced by the contents of the on-chip OTPROM.
- (2) – The serial number string descriptor index could be defined by the contents of the on-chip OTPROM. If specified, the index will be 3 instead of 0.

6.2 Configuration Descriptor

Table 6-2 Configuration Descriptor

Offset	Field	Size	Value	Description
0	<i>bLength</i>	Byte	09h	Size of this descriptor (in bytes)
1	<i>bDescriptorType</i>	Byte	02h	CONFIGURATION descriptor type
2	<i>wTotalLength</i>	Word	0027h	Total length of data returned for this configuration.
4	<i>bNumInterface</i>	Byte	01h	One interface for this device.
5	<i>bConfigurationValue</i>	Byte	01h	
6	<i>iConfiguration</i>	Byte	00h	
7	<i>bmAttributes</i>	Byte	A0h/80h	Characteristic attributes ⁽³⁾
8	<i>MaxPower</i>	Byte	32h/FAh	Maximum power consumption ⁽⁴⁾

Notes:

- (3) – The Remote Wakeup attribute (bit 5) depends on the settings of the Remote Wakeup Enable (bit 0 to 4 of Device

Configuration Register 2). If all remote wakeup sources are disabled, the *bmAttributes* will be 80h. Otherwise, A0h is returned to indicate that this device is Remote Wakeup capable.

- (4) – The value of maximum power consumption depends on the *LD_MODE* (bit 5 of Device Configuration Register 2) parameter. If it is set to 1, the *MaxPower* byte will be FAh for it requires 500mA from the system. Otherwise, it is 32h that indicates 100mA required.

6.7 String Descriptors

The PL2303EA supports four string descriptors:

- Language ID
- Manufacturer
- Product
- Serial Number

Except for Serial Number, the other three string descriptors are stored in the internal Mask ROM, i.e. their contents are fixed. The Serial Number is a special case. If the on-chip OTPROM is not properly programmed, then the Serial Number would be hidden from the system. If the on-chip OTPROM is properly programmed, then the Serial Number will be read from the on-chip OTPROM.

The following tables demonstrate the current defined value for each descriptor:

6.7.1 String Descriptor 0 – Language ID

Table 6-7a String Descriptor – Language ID

Offset	Field	Size	Value	Description
0	<i>bLength</i>	Byte	04h	Size of this descriptor (in bytes)
1	<i>bDescriptorType</i>	Byte	03h	STRING descriptor type

2	<i>bSTRING</i>	—	⇒	“X ₇ X ₆ X ₅ X ₄ X ₃ X ₂ X ₁ X ₀ ” in UNICODE

Note:

The size of Serial Number is fixed in PL2303EA design. It must be exactly 8 UNICODE characters (or 16 bytes). Note that in USB Specification, this serial number must be unique for each device.
